Table of contents

1 Introduction to IoT Communication

- BLE
- Zigbee

2 A Closer look to Zigbee

Introduction to IoT Communication

- Multitude and variety
 - diverse Quality of Service (QoS)
 - huge amount of traffic
 - huge address space
- Self-organization
- Reliability and robustness
- Security and privacy

Introduction to IoT Communication

- Capillary M2M
 - low power
 - low cost
 - short range
- Cellular M2M
 - long distance

Introduction to IoT Communication

- LPWAN
 - NB-IoT
 - LoRaWAN
 - Sigfox
- LPLAN
 - BLE
 - Zigbee
 - WiFi

IEEE 802.11/WiFi

IEEE 802.11.ah

- It uses **900 MHz** license exempt bands to provide *extended range* Wi-Fi networks, compared to conventional Wi-Fi networks operating in the 2.4 GHz and 5 GHz bands.
- It also benefits from lower energy consumption.

IEEE 802.11/WiFi

802.11 proto- col	Release date	Frequency (GHz)	Bandwidth (MHz)	Stream data rate (Mbit/s)
ac	Dec 2013	5	20, 40, 80, 160	Up to 346.8, 800, 1733.2, 3466.8
ad	Dec 2012	60	2, 160	Up to 6,757
ah	Dec 2016	0.9	1–16	Up to 347

IEEE 802.15.1/Bluetooth

- Robustness
- Low Power
- Low Cost

IEEE 802.15.1/Bluetooth

- Bluetooth 1.1
- Bluetooth 4.0 + LE (Bluetooth Smart)
 - As an alternative to the Bluetooth standard protocols that were introduced in Bluetooth v1.0 to v3.0, it is aimed at very low power applications running off a coin cell.
- Bluetooth 5
 - Double the speed (2 Mbit/s burst) at the expense of range
 - Up to fourfold the range at the expense of data rate
 - Eightfold the data broadcasting capacity of transmissions, by increasing the packet lengths.

IEEE 802.15.1/Bluetooth

Piconets

- Bluetooth enabled electronic devices connect and communicate wirelessly through short-range, ad hoc networks known as *piconets*.
- Each device can simultaneously communicate with **up to seven other devices** within a single piconet.

Features

- Bluetooth wireless technology is geared towards voice and data applications and able to penetrate solid objects.
- It is omni-directional and does not require line-of-sight positioning of connected devices.

IEEE 802.15.1/Bluetooth

PHY Layer

- 2.4 GHz frequency band
- 79 Channels, each channel has 1 MHz bandwidth
- 3 Power class for 1, 10 and 100 meter transmission distance
- Physical Links
 - Data Link: Asynchronous Connectionless (ACL)
 - Voice Link: Synchronous Connection Oriented (SCO)

Zigbee

- IEEE 802.15 serial standards are established by IEEE 802.15 Working Group for Personal Area Network or short distance wireless networks.
- Zigbee is built on the IEEE 802.15.4. The two lower layers: the physical (PHY) layer and the medium access control (MAC) sub-layer of Zigbee stack architecture is specified in IEEE 802.15.4.

IEEE 802.15.4 Features

- Data rates of 250 kbps, 40 kbps, and 20 kbps. Symbol rate is 62.5 ksymbol/sspm
- Two addressing mode: 16-bits short and 64-bit IEEE addressing
- Optional use Star-topology or Peer to Peer topology, and also supposes Cluster Tree nowadays.
- CSMA-CA channel access
- Automatic network establishment by the coordinator
- Full handshake protocol for transfer reliability
- Power management to ensure low power consumption

IEEE 802.15.4 Features

- 16 channels in the 2.4GHz ISM band, 10 channels in the 915MHz and one channel in the 868MHz
- Optimal to use Acknowledgement packet
- Transmit Power: About 1 mW transmit power
- RSSI (Received signal strength indication) measurement

Zigbee

Type of Device

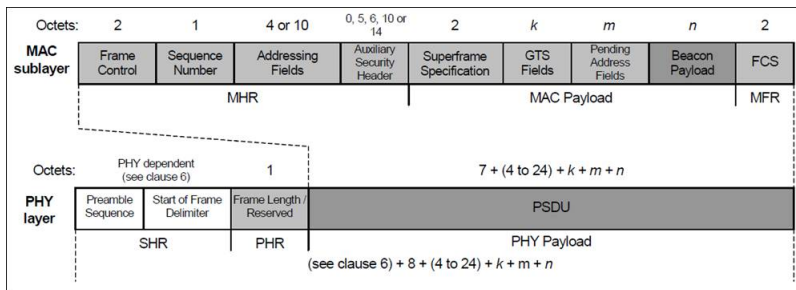

- RFD (Reduced Function Device)
 - Coordinator
 - Router
 - End Device
- FFD (Full Function Device)
 - End Device

Zigbee

Zigbee

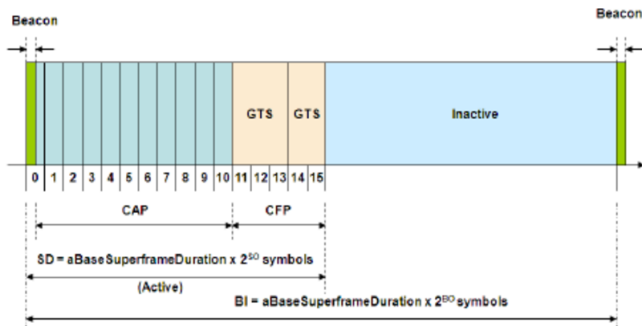

IEEE 802.15.4 MAC-PHY

Zigbee

Superframe Structure

- CAP: Contention Access Period
- CFP: Contention Free Period
- GTS: Guaranteed Time Slots

Zigbee

Zigbee Stack

Zigbee Problems

- Energy Efficiency
- Routing
- Localization
- Data management
- Reliability
- Security

A Closer look to Zigbee

An Energy Efficient Schedule for IEEE 802.15.4/Zigbee Cluster Tree WSN with Multiple Collision Domains and Period Crossing Constraint

- A collision-free cluster schedule that meets all the data flows deadlines
- Minimization of the energy consumption of the nodes
